FABRIC BELT TIE GUM

Fabric Belt Tie Gum

is an uncured rubber compound used in vulcanized splicing of fabric conveyor belts.

Designed to replace skim rubber, it provides reliable bonding across all standard fabric belt grades and enhances overall splice performance.

Extended Splice Life

Increases the working life of fabric belt splices by reinforcing durability.

Improved Flexibility & Strength

Boosts the structural integrity and flexibility of the splice for long-term performance.

Clean Application

Double-sided poly liner prevents surface contamination during normal handling.
