ABOUT

Engineered for vulcanized belt splicing, our **Steel Cord Belt Cable Gum** is an uncured rubber compound designed to replace inter-core cord rubber in steel cord conveyor belts or function as a tie gum in fabric belts. It delivers strong adhesion to cured inter-core rubber and wire cords across all standard steel cord belt grades. It can also be used to enhance bond strength in cured skim rubber on fabric belts.

KEY BENEFITS

Increases splice durability and service life in steel cord belts

Enhances splice flexibility and structural strength

Reduces surface contamination with double-sided poly for clean handling

Includes a poly liner color-coding system for easy compound identification
