SILICONE TREATED

RELEASE PAPER

This calendered Kraft-style **release paper** features a specialized silicone non-stick coating on both sides. It's designed for use between uncured rubber and the vulcanizing press during belt splicing. Ideal for step, finger, and steel cord splicing, it works across all belt types and splice configurations.

Protects Splice Integrity

Prevents sticking to the press, ensuring a clean release and consistent splice surface.

Optimizes Rubber Flow

Improves flow and distribution of rubber during curing for stronger, more uniform splices.

Extends Splice Longevity

Supports cleaner curing conditions, helping to maximize the working life of belt splices.
